Nestor Desabille Jr

nestordesabille4@gmail.com | +63 926 926 5524 | Cebu, Philippines

Summary

Full Stack Product Engineer specializing in ASP.NET Core, Vue.js, SaaS platforms, automation, and AI-powered applications. Experienced in taking products from 0-to-1, owning architecture, backend APIs, frontend development, database design, and deployment. Built automation and AI-powered workflows, including Google Ads integrations, background services, operational tools, and an AI system for assisted decision-making. Strong at translating complex business requirements into practical, scalable software and working independently with international teams.

Experience

Founding Engineer / Full Stack Developer 2025 - Present
Go Overbooked - Cebu, Philippines

- Built and launched a property management SaaS for small accommodation operators, taking the product from concept to production as the sole engineer.
- Designed and developed the full platform across Vue.js, backend APIs, database architecture, authentication, and deployment.
- Built OTA calendar synchronization to consolidate bookings across channels and prevent scheduling conflicts.
- Designed workflows for reservations, room availability, expenses, receipts, and property operations based on real-world hotel workflows.
- Own product decisions, technical architecture, deployment, and ongoing iteration based on customer feedback.

Full Stack Engineer Jul 2023 - Present
Full Scale / At Capacity - Cebu, Philippines (Remote)

- Built and maintained production SaaS features using Vue.js and ASP.NET Core for an advertising automation platform used to manage client campaigns and operational capacity.
- Developed background services integrating with Google Ads to automate campaign controls based on budgets, schedules, and real-time capacity signals.
- Built workflow systems for ROI reporting, multi-account agency management, and campaign templating, replacing manual operational processes.
- Developed an AI-powered operations bot that analyzes configured signals, recommends advertising actions, and automatically approves actions when confidence thresholds are met.
- Worked across frontend, backend, APIs, integrations, and system workflows while collaborating with international product and engineering teams.

Junior Software Engineer Jul 2022 - Jun 2023
Evstream - Remote (Freelance)

- Helped design and build a multi-platform betting intelligence application aggregating real-time data from Australian bookmakers.
- Developed and maintained microservices responsible for scraping, processing, and normalizing live odds and price movements.
- Built a GraphQL-powered frontend with Supabase for application state and user data.
- Implemented workflows for comparing yields and identifying betting opportunities from aggregated market data.

Skills

Frontend: Vue.js (Vue 3, Composition API, Pinia, Vue Router), React.js, GraphQL

Backend: ASP.NET Core, REST APIs, microservices, background services

Database & BaaS: SQL, Supabase, Drizzle ORM (familiar)

Cloud & DevOps: AWS, Azure, GitHub Actions, CI/CD pipelines, Vercel, Railway

Product: 0-to-1 SaaS development, Google Ads API, CRM/ERP integrations, AI coding tools, workflow automation

Education

BS Computer Engineering - University of San Carlos 2019 - 2023
